Opis produktu

The world's most advanced visual effects and motion graphics solution!

Blackmagic Design Fusion 8 is the world's most advanced compositing software for visual effects artists, broadcast and motion graphic designers and 3D animators. With over 25 years of development, Fusion has been used on over 1000 major Hollywood blockbuster feature films! Fusion features an easy and powerful node based interface so you can construct complex effects simply by connecting various types of processing together. That's super easy and extremely fast! You get a massive range of features and effects included, so you can create exciting broadcast graphics, television commercials, dramatic title sequences and even major feature film visual effects!

Nodes, A Better Way to Work!

Fusion uses nodes which are small icons that represent effects, filters and other processing which can be connected together to easily build up larger and more complex visual effects. Because nodes are easy to see and connect together, you can combine tools, images, and objects in any order to create unlimited visual effects. Nodes make it easy to adjust any single part of your project simply by clicking on the node and making an adjustment. That's much faster than a timeline based tool such as an NLE because you don't need to hunt through nested stacks of confusing layers.

Simply More Features

Whether you need to pull a key, track objects, retouch images, animate titles, or create amazing particle effects, Fusion has a massive toolset that lets you tackle the most demanding visual effects and motion graphics jobs. You get the world's best 3D workspace along with tools for compositing, keying, painting, animation, stereoscopic 3D and more, all in a single application!

GPU Accelerated Creative Workflow

Fusion is an extremely fast visual effects software tool that's responsive enough to be used in high pressure, client driven sessions. With its GPU acceleration, you get instant feedback while you work so you can see exactly what you're doing. Whether you're working alone or with a client, Fusion gives you the real time control you need so you can spend more time being creative and less time waiting.

Import and Render 3D Models

Import full 3D models from applications like Maya, 3ds Max and Cinema 4D, then use Fusion to light, shade, composite and render with full GPU acceleration!

Advanced Visual Effects Compositing

Today's Hollywood film effects are made up of hundreds, sometimes even thousands of different 2D and 3D elements that are composited together to create amazing, realistic looking scenes. Visual effects artists use Fusion to seamlessly blend elements together in a true 3D workspace for the ultimate in realism! Fusion features a node based workflow, can import 3D models and scenes from popular applications, and has hundreds of tools, effects and filters for creating the world's most convincing and lifelike visual effects!
